

Complete Hearing Conservation Program

Noise induced hearing loss can be prevented

The World Health Organization says that noise induced hearing loss (or “NIHL”) is the most common permanent but preventable workplace injury in the world.

The good news? Workplace Medical can help your organization prevent this type of hearing loss.

We’re Canada’s oldest and largest hearing conservation specialists. For nearly 40 years we’ve been working with thousands of clients from coast to coast developing comprehensive hearing conservation programs for Canadian industry.

We bring hearing testing to you with our state-of-the-art mobile testing units. At your location, our mobile trucks can test as many as 250 employees per day. We also provide essential education, consultation and custom hearing plugs as part of a complete hearing conservation program.

Complete Four Part Hearing Conservation Program

Mobile Hearing Testing

Hearing testing is the only way to monitor the effectiveness of your hearing protection program. Our state-of-the-art mobile units are operated by Certified Audiometric Technicians and can test up to 250 people per day, thereby minimizing employee downtime and providing cost effective delivery of this core service.

Test results are provided to each participant and management is provided with a comprehensive summary report that spots problem departments, track trends, and sets targets. Our senior consultants also provide follow-up consultation to review your report and offer solutions for problem issues.

Noise Surveys

Our noise surveys establish noise hazard zones and workstations for which we will recommend specific hearing protection protocols and offer suggestions for engineered noise reduction solutions.

Education & Training

We offer a wide range of options from individual counselling sessions, to group seminars, to program management courses. Understanding the how & why of hearing conservation is the key to compliance and program success.

Hearing Protectors

We provide the guidance you need to select the appropriate hearing protectors and we offer a fit-validation service to ensure proper fit. We also provide custom earplugs that provide superior effectiveness compared to traditional models.
